WESTWOOD
LABORATORY LTD

Flexible Dentures

An alternative to conventional acrylic dentures or chromes, we find many patients are not able to easily adapt to a set of acrylic or light alloy dentures, due to the stiffness of material used. Flexible dentures are easily more adjustable designed to function within a flexible environment, to provide a high degree of comfort whilst being unobtrusive as possible yet be strong without been rigid.

Product Features:

- **Comfortable**
- **Flexible**
- **Affordable**
- **Light weight**
- **Strong**
- **No tooth preparation**
- **Hypo-allergenic**
- **No metal clasps**
- **Virtually unbreakable**
